Seamless integration
with teak decking

PREMIUM MARINE FABRIC
UV · SALT · WATER RESISTANT
Custom-made sailcloth
Premium and polished finish

SUPPORT POLES (2×)
CARBON FIBER + 316
STAINLESS STEEL FITTINGS
Lightweight
High-strength

INNOVATION AND PRODUCTION

Key advantage: A foldable sunshade system designed for quick and effortless installation in port and easy removal before navigation or whenever required.

Production: The entire system is developed using advanced 3D design software and manufactured with automated CNC technology.

Founded in Rijeka, Croatia, in 1988, HOTEND is a family-owned company bringing a new level of sophistication to superyacht shading. Our **innovative, foldable, and fully removable sunshade system** creates an elegant sanctuary from the sun whenever you desire it – and disappears when you don't.

Decades of craftsmanship meet clean, contemporary design to elevate life on deck. Engineered using advanced 3D design software and CNC technology, premium carbon-fiber supports, stainless-steel components and flush deck mounts integrate seamlessly while preserving the clean lines of your yacht.

Powered by an integrated motor, the system offers effortless control via smartphone or Crestron integration.

For complete peace of mind, automated wind and rain sensors respond instantly to changing conditions. HOTEND combines decades of expertise with cutting-edge engineering to create bespoke shading solutions for the world's finest superyachts.

25 years later
– we're back!

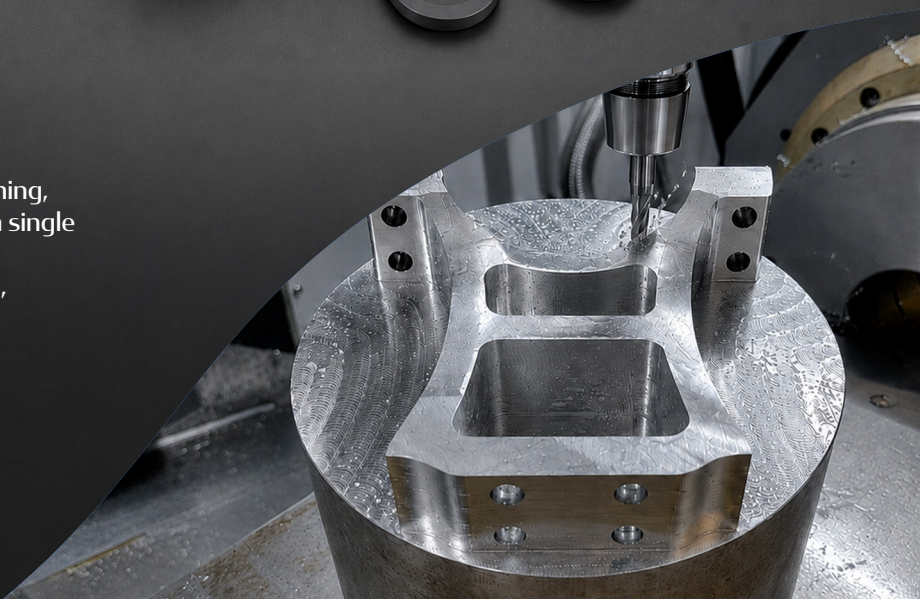

HOTEND introduces a new generation of superyacht shading with an innovative, foldable, and fully removable sunshade system. This technological advancement reflects our ability to meet the most demanding requirements of today's luxury yacht market.

HOTEND is the only sunshade-system manufacturer to bring textile fabrication, metalworking, precision machining, component production and final assembly together at a single facility within the European Union. This fully integrated approach gives us direct control over quality, tolerances, lead times and every detail of the finished system.
